

E-mail Filtering Suite

CIPAFILTER's E-mail Filtering Suite was designed to provide administrators with a simplified and more effective approach to combating spam and junk e-mail. It targets the way spammers operate rather than attempting to analyze each e-mail message. The result is a decrease in spam without any management required, giving the administrator a highly desired *"set-and-forget"* e-mail security solution.

Key Benefits

Virtually eliminates spam mail!

No false positives or over blocking of legitimate mail!

Very little to no management "set-and-forget"!

Includes e-mail anti-virus and pornography filtering of all message content!

Anti-Spam

CIPAFILTER set the bar at an unprecedented high in 2002, when we first released our Anti-Spam system. It has since then been one of the most popular features we have offered.

Most traditional Anti-Spam products base their methods on investigating and analyzing each and every e-mail that passes through, trying to identify the possibility of the message being spam and taking appropriate action. These solutions require end-user and administrator management, in order for things to work properly.

This involves having users define rules, sort through spam folders, administrators and users working with quarantine folders, constantly editing black-lists and more.

Instead, CIPAFILTER studies the way spammers operate and found a way to target these spammers without blocking or preventing legitimate mail servers from sending mail. This helps eliminate the spam consistently, without the need to worry about not receiving an e-mail message.

CIPAFILTER uses two major phases. The first focuses on filtering 90% of spam e-mail without doing anything that would delay or block legitimate e-mail. Many spammers on the Internet use very bad methods of sending spam, and CIPAFILTER has identified how to prevent these spammers. These includes e-mail messages that do not honor their unsubscribe notices, spoof domain names, and much more. The second phase uses more traditional methods that have been fine-tuned to properly identify spam. The end result is a hassle-free anti-spam solution that guarantees delivery of good e-mail to your mail server and ridding all bad and unwanted e-mail communication from your network!

As Stand-Alone Anti-Spam System

As Firewall

As Transparent Bridge

E-mail Filtering Suite

See how **different**
we really are!

E-mail Pornography Filtering

Every email that passes through CIPAFilter will be filtered by our unique context-sensitive pornography filter – part of our Web Content Filter. This filter will read through all the e-mails and look for words and how they are used, and automatically determine if it is inappropriate. This will prevent sexual jokes, most foul language, and sanitize your e-mail communication between users while notifying the administrator of inappropriate content

E-mail Anti-Virus

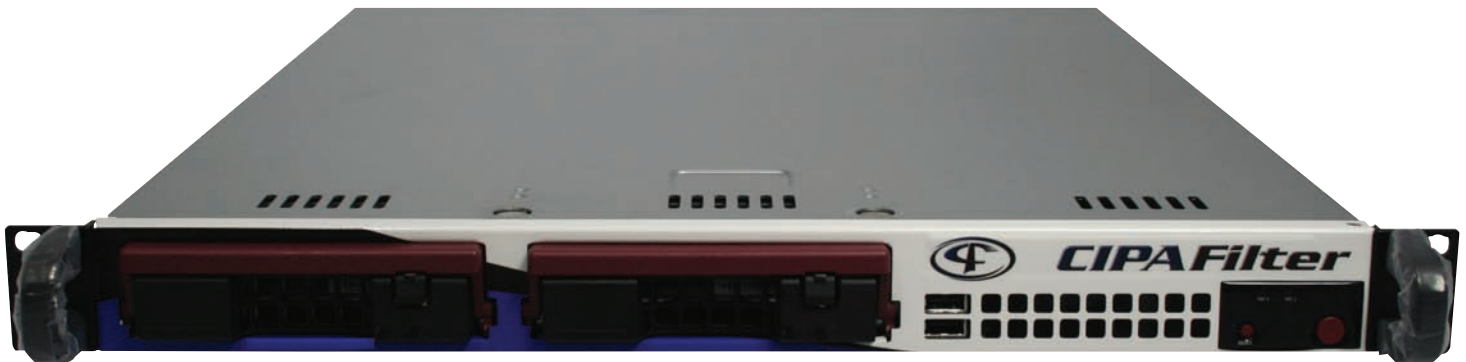

Every e-mail message is scanned to protect against viruses, malware, phishing attempts, and infected attachments. Any potential threat blocked automatically.

E-mail Relay Services

If your mail server is down or unavailable, CIPAFilter will queue the mail until your mail server can again accept messages.

Basic E-mail Archiving

If you have a Microsoft Exchange server or host your mail with Google, you can easily archive all external and internal mail to the CIPAFilter. The interface allows for searching through the database for review, and options to backup e-mail on external media to keep e-mails for years is available.

Our district has complained literally for as long as I have been a tech director about spam e-mail. After just one week we realized just what a gem we had found. We have not had even one complaint so far this school year regarding spam. This feature alone was far worth the purchase of the CIPAFilter"

- USD 493, KS

The CIPAFilter has really cleaned out our spam messages. My own account went from 60-100 e-mails a day to 5-10 important and useful e-mails being received. I would strongly recommend this product to my surrounding IT people for their schools or business. It is easy to administer and really performs!

- Technology Director, IL

The anti-spam feature of the CIPAFilter has been the most popular technology advance for our faculty and staff in a couple of years. As the technology coordinator, the feature is great because I don't have to tweak it; it just works. For our teachers and other employees, CIPAFilter has reduced the number of spam e-mails they receive to about zero."

- USD 102, KS

I would give CIPAFilter the highest possible rating for sales, service, and support. They're not pushy, they're the best priced total solution I've found. Their technical support is bar none the best I've ever worked with. I have a dedicated rep who stops at nothing to help me out when I have issues. You are making a great choice for your district by going with CIPAFilter!
